## Neogen Chemicals IPO

*Leader in bromine chemistry; OFS and fresh issue; Subscribe*

Issue Price: ₹212-215

**Subscribe**

**The leading manufacturer of bromine specialty chemicals in India:** Commencing operations in 1991, at Mahape, Navi Mumbai, with a few bromine-based compounds and lithium salts, now Neogen has become one of India's leading manufacturers of bromine and lithium-based derivatives. Over the years, it has broadened the number of its products 198, comprising 181 organic and 17 inorganic chemicals.

**Capacity expansion, focus on advanced specialty intermediates:** The company has installed capacity for 130,400 litres of organic chemicals and 1,200 tons of inorganic chemicals, with utilisation at respectively 64% and 94%. It plans to double capacity to ~256,000 liters and 2,400 tons of organic and inorganic chemicals to cater to mounting demand. It is trying to forward-integrate bromination with other chemistries to make advanced intermediates, otherwise being manufactured by customers in-house.

**Financials.** Over FY14-18, it reported revenue, EBITDA and PAT CAGRs of respectively ~22%, 26% and 30%. Its EBITDA margin expanded 244bps to 18%. Debt-based capex funding led to its net-debt-to-equity touching 1.9x in FY18, up from 1.2x in FY15. Its RoE and RoCE have averaged ~20% and ~15% respectively over FY14-18. Its cash-conversion cycle was lengthy 145 days in FY18 due to business requirements of maintaining higher inventory for operational benefits.

**Valuation.** At the higher end of the issue price of ₹215 a share, the stock is valued at ~20.1x FY18EV/EBITDA and ~47.8x P/E. Arti Industries and Atul Industries trade at FY18 P/E multiples of 38-42, while Vinati Organics and Navin quote at respectively 21x and 63x. On the annualised 9MFY19 EPS of ₹7, the stock priced at 28.5xPE and 17.4x EV/EBITDA. We believe the higher multiple is justified given the company's ability to grow profitably and command better return ratios. **Risks:** Slow growth in underline sectors such as pharma, high working capital intensity and high debt great dependence on certain customers.

## Leading manufacturers of bromine specialty chemicals in India

Commencing operations in 1991 at Mahape, Navi Mumbai, with a few bromine-based compounds and lithium salts, now Neogen has become one of India's leading manufacturers of bromine and lithium-based derivatives.

Its products are used in pharmaceutical and agrochemical intermediates, engineering fluids, electronic chemicals, polymer additives, water-treatment, construction and aroma chemicals, flavours and fragrances, specialty polymers, chemicals and VAM original-equipment manufacturers.

**Fig 9 – Sale of products across industry segments**

Source: Company

### Products

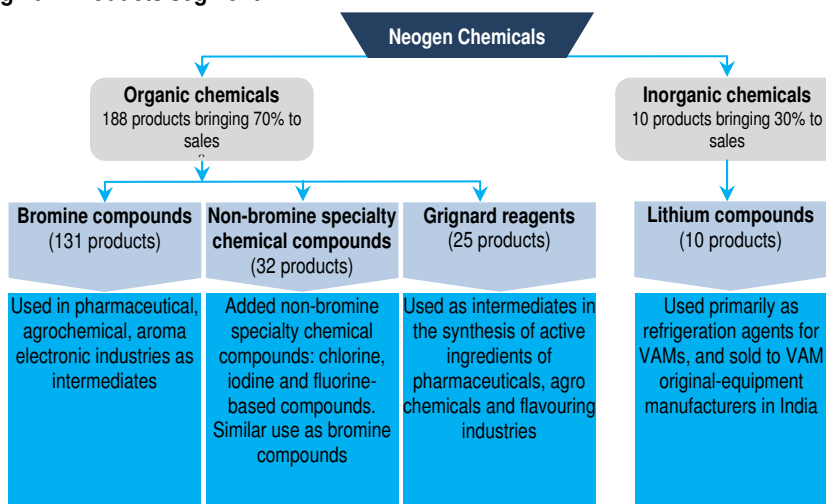

**Organic chemicals** (molecules containing carbon): 131 bromine compounds + 25 organic specialty-chemical compounds.

- Bromine compounds and/or other organic compounds containing chlorine, fluorine and iodine, and combinations of them.
- Niche products such as 25 types of Grignard reagents.

**Inorganic** (non-carbon-containing molecules): 10 lithium compounds.

- Lithium compounds manufactured by Neogen used in vapour absorption machines (VAM) for cooling air/water/process equipment.
- Use in industries such as heating ventilation and air-conditioning (HVAC) and refrigeration, construction chemicals, pharmaceuticals and specialty polymers.

Fig 10 – Products segment

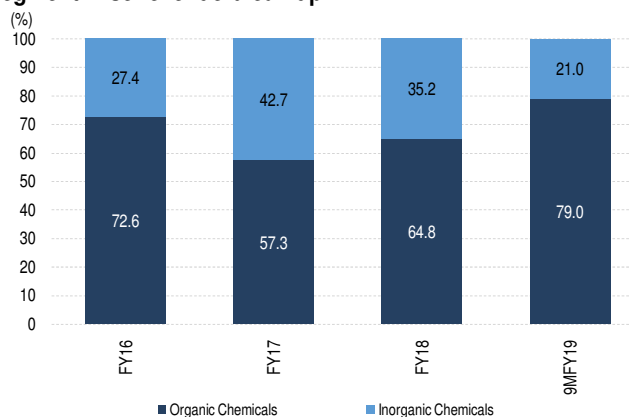

Source: Company

### Custom synthesis and Contract manufacturing (CSCM)

- The company undertakes custom synthesizing and contract manufacturing (CSCM) of a few specialty chemicals for multinational companies based in Europe, Israel, China and Japan. FY16, FY17, FY18 and 9MFY19 income from CSCM was respectively ₹1.2m, ₹24.2m, ₹38.9m and ₹150.6m.
- It has entered into contract-manufacturing arrangements with a few international companies engaged in pharmaceuticals, agrochemicals, aromas and specialty polymer industries. Under some of these arrangements, it has already delivered products.

Fig 11 – Segment-wise revenue break-up

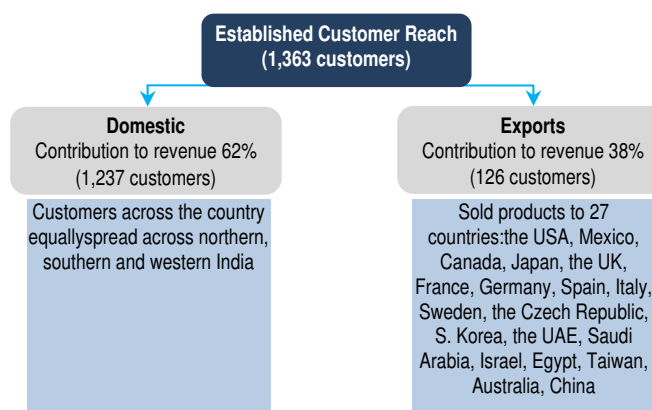

Source: Company

### Strong client base

Over the last 25 years, it has established a customer base of ~1,363, of which ~1,237 are domestic and ~126 international.

It markets its products in India and abroad (50% each), in particular to the USA, Europe and Japan (incl. 16% deemed exports where the company supplies its products to customers who will eventually export the end-product).

**Fig 12 – Strong customer base**

Source: Company

### Major raw materials

The primary raw materials used in the manufacturing process of organic and inorganic specialty chemicals are:

- Bromine source
- Lithium source
- Organic raw materials
- Inorganic acids.

The prices of raw materials procured in India are lower than those of China.

### Employees

On 28<sup>th</sup>Feb'19, Neogen employed

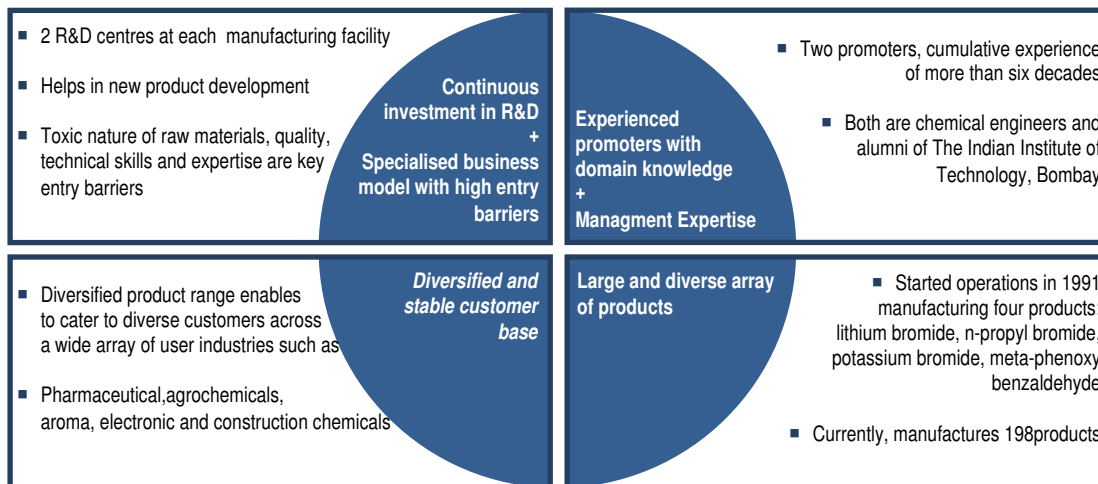

- 152 full-time,
- 45 fixed-term contract employees (generally five-year contracts)
- Four retainers.

### Research and Development

- Two R&D facilities, at
  - Vadodara and
  - Mahape
- A dedicated 20-member R&D team (10% of its workforce).
- Key contribution from the R&D team: From Dec'01, the number of its products has grown from around 20 to 198 at present (excl. CSCM).

## Competitive strengths

Fig 13 – Strong customer base

Source: Company

### Large and diverse array of products

Neogen started operations in 1991 manufacturing four products: lithium bromide, n-propyl bromide, potassium bromide and meta-phenoxy benzaldehyde. Over the years, it widened its product range. By 31 Dec'18, it had manufactured 198 products.

Fig 14 – Expanding product portfolio

Source: Company

### Diversified and stable customer base

The company has a diversified product range, which helps it cater to diverse customers across a wide array of user industries such as pharmaceuticals, agrochemicals, aroma, electronic and construction chemicals, specialty polymers and VAM original-equipment manufacturers. This helps mitigate risks from customers, industry and geographic concentration.

### **Growth driven by continuous investment in R&D**

The company has made regular investments in R&D to expand its product range and streamline its manufacturing processes. It has two R&D facilities, one each in Vadodara and Mahape, with a dedicated 16-member team, constituting ~9% of its workforce. The team comprises five senior personnel (including one retainer) with doctorates in science from reputed institutions. Chairman and MD Haridas Thakarshi Kanani leads the R&D initiatives.

Further, since the commencement of the dedicated R&D department, in Dec'01, the number of its products has grown from around 20 to 198 at present (excl. those developed under contract manufacturing).

Per management, product and process innovations will be key factors ahead and continuing investment in R&D will benefit from coming opportunities.

### **Specialised business model with high entry barriers**

The bromine-specialty-chemicals industry is highly knowledge-intensive. The end use of products is to manufacture high-value proprietary and specialised products. This requires that each process and product is measured against exacting quality standards and stringent impurity specifications.

Further, product use has been formally recognised in filings with Regulatory agencies. Any change in the vendor of a product may require significant time and cost to a customer. These factors are significant entry barriers.

Over the years, the company has built strong relations of more than a decade with customers who recognise technical capabilities and timely deliveries and associate the brand with good and consistent quality.

Moreover, some of the chemicals used such as bromine and lithium are highly corrosive and toxic. Therefore, handling them requires a high degree of technical skill and expertise. Operations involving such hazardous chemicals ought to be undertaken only by qualified and proficient personnel.

Per management, the level of technical skill and expertise essential to handle such chemicals can only be achieved over time, creating as further barrier to new entrants.

### **Established, stable relations with suppliers**

The company's consistent track record of business growth over the years and repeated business from customers have enabled it to develop long-standing relations with suppliers. It has relations of over a decade with large producers of bromine and lithium.

The company has annual contracts, offering stable pricing to customers. Further, due to large volume of the annual contracts, it is able to negotiate attractive pricing compared to local competitors. This gives it an edge.

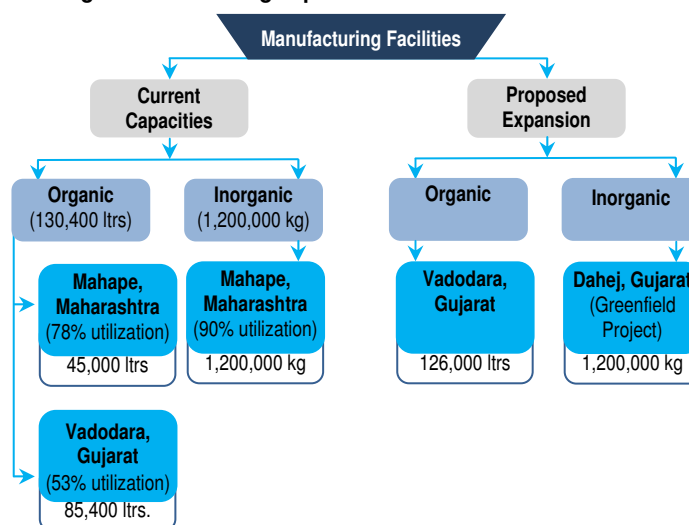

## Growth triggers

### Capacity expansion, focus on advanced specialty intermediates

With installed capacity of 130,400 litres of organic chemicals and 1,200 tons of inorganic chemicals and utilisation at respectively 64% and 94%, the company plans to double capacity to ~256,000 litres and 2,400 tonnes of organic and inorganic chemicals to cater to growing demand in the industry. It is trying to forward integrate bromination with other chemistries to make advanced intermediates, otherwise being manufactured by customers in-house.

Fig 15 – Existing and forthcoming expansions

Source: Company

### Augmenting growth in domestic and global markets

Its domestic and export businesses contribute almost 50% each (including 16% deemed exports, where the company supplies products to those who eventually export end-products).

The company believes that demand for bromine-based and lithium-based products will grow in India and overseas owing to growth in industries where they are finally utilised (pharma, agrochemicals, refrigeration, polymer syntheses, flavour and fragrances, etc.).

It is poised to exploit opportunities thrown up by the expected growth in the industries which finally use the chemicals due to

- Strong manufacturing capabilities
- Established customer relations
- Strong R&D capabilities
- Robust product range.

Specialty chemicals manufactured in China comprised a significant proportion of the specialty chemicals global market. The decline in China due to environmental concerns regarding manufacturing specialty chemicals, will leave the field open to the company regarding its future growth.

## About the management

### Experienced promoters with domain knowledge

Promoters Haridas Thakarshi Kanani and Harin Haridas Kanani have cumulative experience of more than six decades. Before setting up Neogen in 1989, the former was a consultant to many chemical manufacturing companies in India. The latter was with Asian Paints. He also worked with a research company, Pioneer Hi-Bred International, a DuPont Company, USA.

**Fig 16 – About the management**

**Haridas Kanani**  
Chairman & MD

A chemical engineering from IIT- Bombay. He oversees the manufacturing, R&D and general operation along with general management of Company's manufacturing units.

**Harin Haridas Kanani**  
Joint Managing Director

A chemical engineer from IIT- Bombay and a master's degree and a doctorate in chemical engineering from the University of Maryland. He heads various divisions of Company including R&D, business development, quality control, purchase, marketing and finance.

**Sanjay Natwarlal Mehta**  
Independent Director

Practicing CA with 42 years' experience; expertise in corporate audit and taxation, regulatory compliances, international taxation and corporate law

**Hitesh B. Reshamwala**  
Independent Director

Chartered Accountant with 29 years' expertise in tax and statutory compliances

**Ranjan Kumar Malik**  
Independent Direct

Gold medalist in engineering and technology from Kanpur University; Master's, chemical engineering from IIT, Kanpur; PhD from the University of Wisconsin-Madison, USA

**Avi Kersi Sabavala**  
Independent Director

B.Sc.(Hons.) from Delhi University; LLB from Maharaja Sayajirao University, Baroda, M.A. (Social Work) from Delhi University and Diploma in Management from The Indira Gandhi National Open University

**Anurag Surana**  
Non-Executive Director

B.Com (Hons.) from the University of Delhi; was previously executive director on the Board of PI Industries for 14 years

**Shyamsunder Upadhyay**  
Executive Director

M.Sc. from Vikram University, Ujjain. 41 years' experience in chemicals. Oversees maintenance, logistics, administration and the engineering store

*Source: Company*

## SWOT analysis

### Strengths

- The company's consistent track record of business growth over the years and repeated business from existing customers have enabled it to develop long-standing relations with suppliers.
- It has relations of over a decade with large producers of bromine and lithium.
- It has annual contracts, which offer stable pricing to customers.
- Further, its large volume of annual contracts gives it the ability to negotiate attractive pricing compared to local competitors. This gives it an edge.

### Weakness

- Significant dependence on few suppliers.
- Explosive growth proportion of use by end-consumers cannot be envisaged.

### Opportunity

- With greater capacities in organic and inorganic chemicals will help to cater the growing demand in the industry.

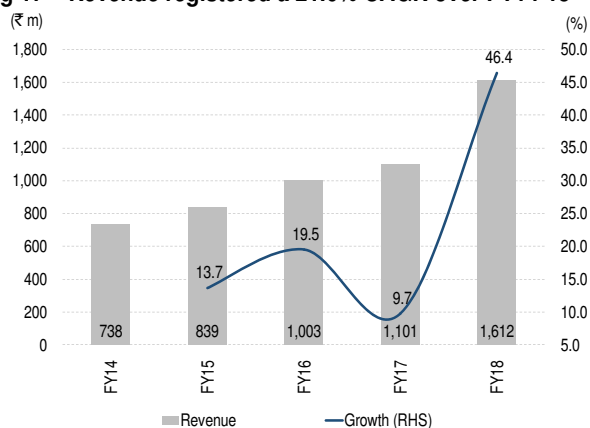

### Threats

- Risk to pass on the rise in the raw material prices
- Volatility in forex rates
- Working capital intensive business
- Any environmental issues.

# Financials

Over FY15-18, the company reported revenue, EBITDA and PAT CAGRs of respectively ~22%, 26% and 30%. Its EBITDA margin expanded 244bps over FY14-18 to 18%. Capex funding pushed up its net-debt-to-equity to 1.6x in FY18, from 1.2x in FY15. In FY18 its RoE was 21%; its RoCE 13.4%. Higher inventory days lengthened its cash-conversion cycle to average 140 days over FY14-18; 159 days in Dec'18.

**Fig 21 – Healthy return ratios**

Source: Company

**Fig 22 – Lengthy working-capital cycle**

Source: Company

## Reasons for high working-capital

### Inventory days

The company manufactures many products. Customers' specifications are different, with different impurity profiles. Consequently, production time from a given reactor to make one tonne of a product can range from five to 30 days. To support such requirements, the company has, in the past, maintained ~120-145 days of work-in-progress on the cost-of-goods sold.

### Receivable days

The company had 83 and 94 days of receivables in respectively FY18 and FY17. With the expected increase in letter-of-credit-backed domestic sales and exports, the company expects receivables to improve to 75 days in FY19.

### Payable Days

The company had had 163 and 131 days for payables in respectively FY17 and FY18 due to maintaining buyer's credit for import purchases. In the absence of buyer's credit, it expects the payables cycle to contract to 75 days.

##### Other Disclosures pertaining to distribution of research in the United States of America

This research report is a product of ARSSBL, which is the employer of the research analyst(s) who has prepared the research report. The research analyst(s) preparing the research report is/are resident outside the United States (U.S.) and are not associated persons of any U.S. regulated broker-dealer and therefore the analyst(s) is/are not subject to supervision by a U.S. broker-dealer, and is/are not required to satisfy the regulatory licensing requirements of FINRA or required to otherwise comply with U.S. rules or regulations regarding, among other things, communications with a subject company, public appearances and trading securities held by a research analyst account.

This report is intended for distribution by ARSSBL only to "Major Institutional Investors" as defined by Rule 15a-6(b)(4) of the U.S. Securities and Exchange Act, 1934 (the Exchange Act) and interpretations thereof by U.S. Securities and Exchange Commission (SEC) in reliance on Rule 15a 6(a)(2). If the recipient of this report is not a Major Institutional Investor as specified above, then it should not act upon this report and return the same to the sender. Further, this report may not be copied, duplicated and/or transmitted onward to any U.S. person, which is not the Major Institutional Investor.

In reliance on the exemption from registration provided by Rule 15a-6 of the Exchange Act and interpretations thereof by the SEC in order to conduct certain business with Major Institutional Investors, ARSSBL has entered into an agreement with a U.S. registered broker-dealer, Cabrera Capital Markets. ("Cabrera"). Transactions in securities discussed in this research report should be effected through Cabrera or another U.S. registered broker dealer.

1. ARSSBL or its Affiliates may or may not have been beneficial owners of the securities mentioned in this report.
2. ARSSBL or its affiliates may have or not managed or co-managed a public offering of the securities mentioned in the report in the past 12 months.
3. ARSSBL or its affiliates may have or not received compensation for investment banking services from the issuer of these securities in the past 12 months and do not expect to receive compensation for investment banking services from the issuer of these securities within the next three months.
4. However, one or more of ARSSBL or its Affiliates may, from time to time, have a long or short position in any of the securities mentioned herein and may buy or sell those securities or options thereon, either on their own account or on behalf of their clients.
5. As of the publication of this report, ARSSBL does not make a market in the subject securities.
6. ARSSBL or its Affiliates may or may not, to the extent permitted by law, act upon or use the above material or the conclusions stated above, or the research or analysis on which they are based before the material is published to recipients and from time to time, provide investment banking, investment management or other services for or solicit to seek to obtain investment banking, or other securities business from, any entity referred to in this report.
